THE LADYBIRD  
BASIC ARITHMETIC  
SERIES

Book 1

### **Mathematics through discovery and practice**

"Mathematics is a discovery of relationships and the expression of the relationship in symbolic (or abstract) form . . . . .

Practice is necessary to fix a concept, once it is understood. Therefore practice should follow, not precede, discovery".

*(Curriculum Bulletin No. 1 of the Schools Council.)*

Children make their own discoveries about number, if they have suitable experiences, especially in real life situations. Numbers are not met in isolation from language or experience.

Practice in the four rules of Arithmetic is presented in these four carefully graded books of the Ladybird Basic Arithmetic series :-

**Book 1** covers the 100 basic facts of addition

**Book 2** covers the 100 basic facts of subtraction

**Book 3** covers the 100 basic facts of multiplication

**Book 4** covers the 90 basic facts of division

Each of these 390 essential number combinations is linked with an attractive illustration which offers the maximum help for happy learning.
